Sport In The Box Support

Release Notes - v 1.5.22

Josefin Ström - 2026-05-11 - Comments (0) - Releases

This release bundles improvements across templates, hardware support, performance, and stability.

New Templates

- **Simple Scoreboard template** — a stripped-down, cleaner version of the standard scoreboard with bigger text and better alignment, available for general.
    - Only displays score, teams and time.

Futsal

- Update default settings of Futsal to match rules for the sport.

USB & File Handling

- **Apple-formatted (HFS+) USB drives now work** — previously they failed to mount.

External Buttons

- Shot clock now pauses on **button press down.** As long as the button is held down, the shot clock will not be running until button is released.

Stability & Performance

- Major performance cleanup across the UI - now much lighter during live game to reduce risk of lag.
- Remake of how **teams** are fetched **over Sport in the Box pairing,** to fixing issues where teams were not found in Score Pilot.

Bug Fixes

- Logos in templates no longer blink for a missing/broken logos.
- Deleting a sport config no longer resets any custom sort order.
- Saturn UDP protocol: Fix bug where wrong values were used:
    - The last 2 digits of player numbers longer than 2 digits.
    - Sending the correct time when continuing from the last period.
