Sport In The Box Support

Release Notes - v 1.6.17

Josefin Ström - 2026-06-09 - Comments (0) - Releases

This release bundles improvements for performance, and stability.

- **Added a new field for Team Name**, to be able to distinguish between different teams for the same club.
- Optimize user interactions by remembering last choice between adding player foul, points and penalties by selecting from list of players or entering player number. Previously selected tab is now remembered to make it easier.
- Stay connected to **Sport in the Box more reliably when a device IP address changes**.
- Start new devices with the correct default volume settings.
- **Fixed bugs in Saturn data being sent from Scorepilot:**
    - Players with more than 3 characters in the playernumber is now sending last 2 digits instead of nothing.
    - For cumulative time in periods the correct time is now sent, for example in 45 minute periods the second period will start the clock from 90 minutes and continue counting up.
    - Send correct values for start/stop clock, making the dots for whether or not time is running be displayed correctly. This includes fix for time running point on shot clocks as well.
- View clearer battery information and correct battery width display.
