Sport In The Box Support

Score Pilot - v1.11.13 Release Notes

2026-11-17 - Josefin Ström - Comments (0) - Score Pilot Releases

Games

- **Fixed a bug to make pincode needed to start or resume a game work again.** If a sport configuration is protected by a pincode, you now have to enter it before you can start or resume a game with it. This applies everywhere: resuming from the home screen, the games list, Start/Resume in game setup, Quick start and Restart game. The pincode is always checked against the sport configuration's current pincode, so changing it takes effect right away.

Image editor

- When you edit a team logo, the preview now fits the editor panel instead of being cut off at the top and bottom.

- Cropping now works like the crop tool in Manage images: the whole image fits in view from the start, and you can zoom in from there.

Reliability

- Fixed a problem on consoles running the newest operating system where a fault in the LED lights could stop the buttons, battery status and update pages from working. If the LEDs fail now, they just stay dark and the rest of the console keeps working.

General

- General maintenance and security fixes.
