Sport In The Box Support

Sport The Box version v2.16 released

2023-09-06 - Dmitri Peredera - Comments (0) - Sport In The Box Releases

We're happy to announce the release of Sport In The Box version 2.16.8649.20948

This is a major update, here are some of the improvements made:

Screen controller

- Add option to start ScreenController as virtual device.
- Fixed bugs in playlist sorting on drag and drop.
- Fixed bug with changing scaling from custom to keep aspect ratio.

QuickButtons

- Major update of QuickButtons with QuickButton page functionality (note that API has changed).
- New page is now shown behind sport controller as tab by default (old style can be changed in general settings)
- Button. group and page colours are now used in the SIB interface. It was used for API only in previous releases.
- Improved drag and drop between different elements.

Replays

- Fixed bug with replay not always saved.

Video inputs

- Add option to general settings to disable video input restore timer (new devices won’t be discovered and existing devices won’t be reconnected at runtime).

Video windows

- Fixed window reposition bug.
- Fixed bug with borders
- Other fixes.
- Add preview buffer settings.

Templates

- Each html layer has now own cache and (login details are saved between sessions).
- Each html layer has own debug port, port starts with 9999 and is increased by one.
- There is now possibility to override template settings from pack settings.
- Fixed bug with templates not cleared when switching between template types.
- Add HTML option for delayed / forced load in ScreenController settings.

Combined output

- Fix hang when changing border.

Multisport

- Added short team name to teams grid.

Miscellaneous

- After installing new version, backup of database is created at first run and saved with old version number and date of backup in Backup folder.
- Backup of database list on start form is saved in Backup folder in SIB folder in My documents.
- Update of internal SDK.

Bug fixes

- Bug when with hang on “Loading interface“
- Bug when html preview stopped working after a while
- Bug with image duration.
- Bug when error message was shown when auto-starting database

Rendering

GPU-decoding is now enabled by default in general settings. May not work well for old GPU’s.
