# How to force user to log out before another user can log in

Dmitri Peredera - 2025-09-15 - Kommentarer (0) - Common questions

**Sport In The Box** uses network API and global object names. That can lead to special effects problems when switching user in windows and leaving program running.

Common solution is to disable **Fast User Switching** in Windows, you can modify the Windows Registry or use Group Policy. Below are the steps for both methods:

### Method 1: Using the Windows Registry

1. Open the Registry Editor:

- Press Win + R, type regedit, and press Enter.
- 2. Navigate to the following key:

HKEY LOCAL MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System

3. Create or modify the *HideFastUserSwitching* value:

- Right-click in the right pane, select New > DWORD (32-bit) Value, and name it *HideFastUserSwitching*.
- Double-click the *HideFastUserSwitching* value and set its data to 1.
- 4. Close the Registry Editor and restart your computer for the changes to take effect.

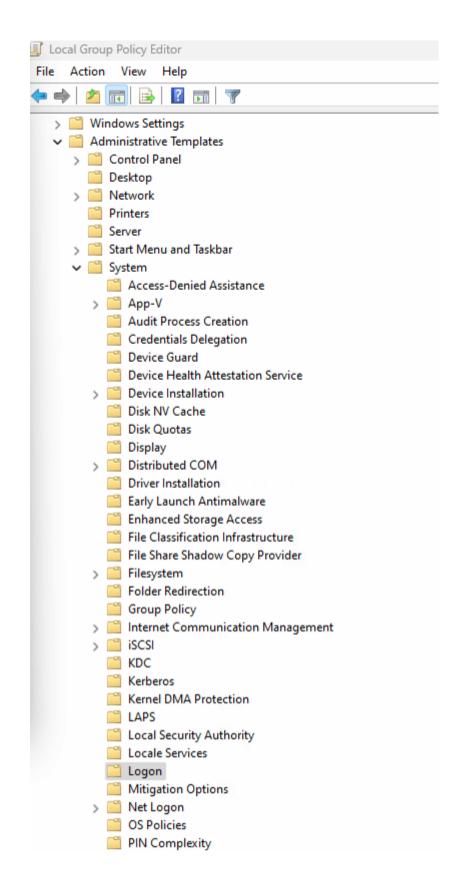

### Method 2: Using Group Policy (Windows Pro or Enterprise)

Open the Local Group Policy Editor

Press Win + R, type *gpedit.msc*, and press Enter.

Navigate to the following path

Computer Configuration > Administrative Templates > System > Logon

Enable the policy:

Double-click Hide entry points for Fast User Switching.
