How to tile with VideoWindow

Dmitri Peredera - 2023-10-23 - [Kommentarer \(0\)](#) - [Combined Output](#)

LED screens are usually visible in Windows as regular monitors and have resolution like 800X600PX.

The picture from video above is **3200 x 96px** and represents a pre-manufactured content where each ICC logo can be a different vendor. It can be scaled with the *CombinedOutput*, but other way is to scale it with the *VideoWindow*.

Configure ScreenController

Got to the ScreenController settings and change vide format to *Custom* at **3.200 x 96 at 50fps**,
For the purpose of the tutorial, change background to white or color bars.

 Screen controller

 Transition type:

 Duration (seconds):

Configure VideoWindows

Go to the *VideoWindow* settings and press *add* button to create new video window.
Window position can be changed either by changing values in settings or moving selected window.

Create first *VideoWindow* and set the source to the Main *ScreenController*. Main *ScreenController* should be **3200 X 96px**.

Change window *width* and *crop width* to 1280.

Window

Crop

Reset

Start X:

0

Width:

1,280

Start Y:

0

Height:

96

Press *copy* button and copy window two times.

Change values to match the following table.

| Name | X | Y | Width | Height | Start X | Start Y | Crop width | Crop Height |
|----------|---|-----|-------|--------|---------|---------|------------|-------------|
| Window 1 | 0 | 0 | 1280 | 96 | 0 | 0 | 1280 | 96 |
| Window 2 | 0 | 96 | 1280 | 96 | 1280 | 0 | 1280 | 96 |
| Window 3 | 0 | 192 | 640 | 96 | 2560 | 0 | 640 | 96 |

Note that last *Window 3* has less content that fit on the whole row. Both *width* and *crop width* are set to the remaining content width.

Add files

Close settings window, go to the playlist and add file with the format of **3200 x 96px** and loop it.

Start playback.

The result, with the borders enabled will look like that:
