## Windows Monitor Reset Guide

Dmitri Peredera - 2025-05-28 - [Kommentarer \(0\)](#) - [Common questions](#)

Reset monitor numbering by clearing graphics driver registry entries.

⚠ **Warning:** Always backup registry entries before deletion.

### Steps

#### 1. Prepare

- Disconnect all monitors except your desired monitor #1
- Works best on desktop computers

#### 2. Backup Registry

1. Press Windows + R, type regedit, press Enter
2. Export these locations (right-click → Export):
  - HKEY\_LOCAL\_MACHINE\System\CurrentControlSet\Control\GraphicsDrivers\Configuration
  - HKEY\_LOCAL\_MACHINE\System\CurrentControlSet\Control\GraphicsDrivers\Connectivity

#### 3. Delete Registry Entries

1. Delete both registry locations above (right-click → Delete)
2. Close Registry Editor

#### 4. Restart

1. Shut down computer completely
2. Boot with only monitor #1 connected
3. Wait for Windows to detect the monitor

#### 5. Reconnect Monitors

1. Connect additional monitors one at a time

2. Each will be numbered sequentially (monitor #2, #3, etc.)

## **6. Verify**

- Check "Display settings" to confirm proper numbering

## **Recovery**

If something goes wrong, restore the exported registry files by double-clicking them.
